Vision Correction Surgery... the future is now with the ReSTOR® lens

This year alone, millions of patients will choose to have their vision and their lifestyles changed forever. A cataract can be the reason sharp images are blurred, bright colors are dull, or seeing at night is more difficult. It may also be why your glasses no longer seem to help with your daily activities. Intraocular lens (IOL) technology has taken a gigantic leap forward. Today, the goal is to enhance your vision with an IOL that may provide you with full range of vision, thus minimizing your dependence on glasses, including reading glasses or bifocals. The AcrySof® ReSTOR® IOL is available

and delivers a high level of glasses-free vision allowing patients to see clearly at all distances. Refractive Lens Exchange (RLE) with the ReSTOR® IOL is available

to patients as an alternative procedure to laser vision correction surgery. The primary difference between cataract surgery

and RLE is that cataract surgery removes a patient's cloudy lens and RLE is performed to reduce one's dependence on glasses or contact lenses. RLE may be the procedure of choice for patients who are too nearsighted, too farsighted or have corneas that are too thin for laser vision correction. It may also be a viable alternative for those over age 45 who wish to eliminate their dependence on bifocals or reading glasses. Dr. Adam Friend specializes in cataract and corneal surgery. We offer complimentary screening for patients who wish to explore their options for vision correction surgery.

Dr. Adam Friend... the choice was clear for Dr. Harvey Dobrow

Dr. Adam Friend joined our ophthalmology practice in November 1998, continuing our dedication to providing comprehensive eye care for the past 50 years. His fellowship-trained expertise in refractive surgery brought a new dimension to the practice.

He specializes in cataract surgery, multifocal IOLs, LASIK and the latest techniques in corneal repair and transplantation, placing Eye Care Associates of NJ among a select few in the area offering all these services. I proudly recommend his surgical expertise

to all my patients. Dr. Friend attended Albert Einstein College of Medicine and completed his cornea fellowship at the University of Texas Southwestern Medical Center. He is the Associate Director, Dept. of Ophthalmology at Valley Hospital.
